

Sales Performance Dashboard – Excel

Professional README for GitHub Project

■ Project Overview

This project presents an interactive Sales Performance Dashboard created in Microsoft Excel. The dashboard is designed to analyze sales performance across different regions, months, and product categories, helping users understand sales trends and compare performance using interactive filtering.

■ Objectives

- Analyze overall sales performance.
- Compare sales across different regions.
- Understand monthly sales trends.
- Compare sales by product category.
- Create an interactive dashboard using PivotTables, PivotCharts, and slicers.
- Present business insights in a clear and easy-to-understand format.

■■ Tools & Technologies

Tool	Purpose
Microsoft Excel	Data analysis and dashboard creation
PivotTables	Summarizing and analyzing sales data
PivotCharts	Creating visualizations
Slicers	Interactive filtering
Excel Table	Organizing the source dataset

■ Dashboard Features

Sales by Region — Compares sales performance across Central, East, South, and West regions.

Monthly Sales — Shows sales trends over time using a monthly sales visualization.

Sales by Category — Compares sales across product categories.

Region Slicer — Allows users to interactively filter the dashboard by region.

■ Dataset

The dashboard uses a Superstore-style sales dataset containing fields such as Order Date, Region, Category, Product Name, Sales, Quantity, Discount, and Profit.

■ Key Analysis Areas

- Regional sales performance

- Monthly sales trends
- Category-level sales performance
- Interactive regional filtering
- Business-focused visual reporting

■ How to Use

1. Open the Excel workbook.
2. Go to the Dashboard sheet.
3. Use the Region slicer to filter the dashboard.
4. Review the charts to compare regional, monthly, and category-level sales performance.

■ Project Structure

Sales_Dashboard.xlsx – Main Excel dashboard workbook
README.md – Project documentation
README.pdf – PDF version of the project documentation

■ Project Outcome

This project demonstrates practical skills in Excel data analysis, PivotTables, PivotCharts, dashboard design, and interactive reporting. It can be used as a portfolio project to demonstrate beginner-to-intermediate business data analysis skills.
